

OECD DATABASE ON TRIADIC PATENT FAMILIES

February 2015 edition

BACKGROUND INFORMATION

A patent family is defined as a set of patents taken in various countries for protecting a same invention, i.e. related patents are regrouped into a single record to derive a unique patent family. The OECD "Triadic" Patent Families consists in a set of patents filed for at the European Patent Office (EPO), the Japan Patent Office (JPO) and the United States Patent and Trademark Office (USPTO) that share one or more priority applications.

Note that the coverage of the Triadic Patent Families has been extended and now includes patent applications published by the USPTO from the early 2000s, and do not only refer to USPTO patent grants as in previous editions of the dataset.

The EPO's *Worldwide Statistical Patent Database* (PATSTAT, Autumn 2014) is the primary data source: PATSTAT database provides a harmonised and comparable set of information on EPO, JPO and USPTO patents.

DATABASE STRUCTURE & COVERAGE

The OECD Triadic Patent Families database (TPF) mostly rely on the INPADOC family table provided in PATSTAT, that is further consolidated in order to integrate patent families linkages using PCT information when existing. Data is presented according to a unique family identifier (*Family_id*) that is automatically generated for each new version of the database (it is therefore not possible to compare identifiers from one edition to another). The TPF data can be linked to PATSTAT recent editions, using the surrogate key *Appln_id* of each family member.

The OECD TPF dataset is provided as 9 distinct files, according to the levels of information on each family. Bibliographic information is provided for all triadic patent families, in sets of flat files based on UTF-8 format, using a pipe character ("|") field separator, text being enclosed with quotes "". The data is organised as a set of relational tables that can be connected using the unique *Family identifier (Family_id)*. Mind that the *Family_id* is automatically generated for each version of the OECD TPF Dataset and should not be compared from one version to another. February 2015 edition now covers 1,243,221 distinct patent families, broken down by earliest priority date as shown in the table opposite.

DATABASE STRUCTURE

TPF_EPO		1,429,067 rows
List of EPO patents in the family		
Family_id	Family identifier (from CORE table – repeated entry)	
EPO_Nbr	EPO application number ("EPYYYYNNNNNNN")	
Appln_id	Surrogate key - applications in PATSTAT, Autumn 2014	
Title	English title of the EPO filing	

TPF_USPTO		1,786,212 rows
List of USPTO patents in the family		
Family_id	Family identifier (from CORE table – repeated entry)	
USPTO_Nbr	USPTO publication number ("US0NNNNNNN" for USPTO Grants "USYYYYNNNNNN" for USPTO Applications)	
Appln_id	Surrogate key - applications in PATSTAT, Autumn 2014	
Title	English title of the USPTO patent	

TPF_JPO		1,493,320 rows
List of JPO patents in the family		
Family_id	Family identifier (from CORE table – repeated entry)	
JPO_Nbr	JPO application number (not harmonised)	
Appln_id	Surrogate key - applications in PATSTAT, Autumn 2014	
Title	English title of the JPO patent <i>only where an english translation is available</i>	

TPF_PCT		744,227 rows
List of PCT filings in the family		
Family_id	Family identifier (from CORE table – repeated entry)	
PCT_Nbr	PCT publication number ("WOYYYYNNNNNN")	
Appln_id	Surrogate key - applications in PATSTAT, Autumn 2014	

TPF_PRIORITY		2,972,879 rows
List of priority filings + other patent linkages		
Family_id	Family identifier (from CORE table – repeated entry)	
Patent_nbr	Priority number or related patent application (Country code 'CC'+Application number)	
Parent_Type	Identification of the patent linkages using PATSTAT tables: PRIO for Paris convention links (from APPLN_PRIOR table); CONTN for continuations in part or divisions (from APPLN_CONTN table); TECH for technical relations (from TECH_REL table); PCT for links based on PCT filings (using Internat_Appln_id from APPLN table)	
Appln_id	Surrogate key - applications in PATSTAT, Autumn 2014	

TPF_CORE		1,243,221 rows
Summarised composition of families		
Family_id	Unique family identifier : 1 to 1,243,221 (from the earliest priority to the latest; mind that the identifier is automatically generated for each data release)	
Count_prio	Total number of priority applications in the family (counts only the priority links Paris convention definition: count_prio=0 when other patent linkages are used – e.g. technical relations, divisions or continuations, PCT, etc.)	
First_Prio	Earliest priority date – YYYYMMDD – when count_prio=0, the earliest date of patent family members,	
Last_prio	Latest priority date – YYYYMMDD	
USPTO_app_first	Earliest filing date at USPTO – YYYYMMDD	
USPTO_app_Last	Latest filing date at USPTO – YYYYMMDD	
USPTO_grant	Optional - Earliest date of grant at USPTO - YYYYMMDD	
Count_USPTO	Total number of USPTO patents granted that belong to the family	
EPO_app_first	Earliest filing date at EPO – YYYYMMDD	
EPO_app_last	Latest filing date at EPO - YYYYMMDD	
EPO_grant	Optional – Earliest date of grant at the EPO - YYYYMMDD	
Count_EPO	Total number of EPO patent filings that belong to the family	
JPO_app_first	Earliest filing date at JPO - YYYYMMDD	
JPO_app_last	Latest filing date at JPO - YYYYMMDD	
JPO_grant	Optional – Earliest date of grant at the JPO - YYYYMMDD	
Count_JPO	Total number of JPO patent filings that belong to the family	
PCT_app_first	Optional – Earliest PCT filing date - YYYYMMDD	
Count_PCT	Optional – Total number of PCT filings that belong to the family, if any	

TPF_IPC		25,178,952 rows
list of IPC classes of each family member		
Family_id	Family identifier (from CORE table – repeated entry)	
Appln_id	Surrogate key - applications in PATSTAT, Autumn 2014	
Appln_auth	Patent application authority (EP/JP/US)	
IPC	International Patent Classification, 8th edition	
Count_IPC	Count of IPC classes per family member	

TPF_INVENTORS		3,822,010 rows
List of inventors ¹ in the family - from USPTO patents		
Family_id	Family identifier (from CORE table – repeated entry)	
Inventor	Name of the inventor	
Address	City of residence of the inventor	
Country	Country of residence of the inventor - 2 digits ISO code	
Inventor_Count	Total number of inventors included in the family	
Inventor_Share	Share ² of each inventor in the family (<i>for fractional counts</i>)	

TPF_APPLICANTS		2,778,182 rows
List of applicants ¹ in the family - from USPTO patents		
Family_id	Family identifier (from CORE table – repeated entry)	
Applicant	Name of the applicant	
Address	City of residence of the applicant	
Country	Country of residence of the applicant - 2 digits ISO code	
Applicant_Count	Total number of applicants included in the family	
Applicant_Share	Share ² of each applicant in the family (<i>for fractional counts</i>)	

1. When missing, inventors (respectively applicants) were added to the applicant's table (resp. inventor's table).

2. Shares of applicants/inventors are provided to facilitate fractional patent counts: e.g. for a patent family co-invented by 1 French, 1 American and 2 German residents, the respective shares will be FR=0.25, US=0.25, DE=0.25+0.25.
